An ecological city that seeks sustainability has been developed as one of various types like green city, environmental city, ecology city, ecological engineering city, environment-friendly city, sustainable city, eco-city or eco-polis in the developmental urbanization process to solve environmental issues within cities and preserve ecosystem in cities. In addition, it is emerging as an alternative vision to form an ecoculture city that aims at the internal fusion of ecological value and cultural value in the process of city development.

This study aimed to define the notion of ecoculture city from the eco-cultural point of view to improve the quality of life and create pleasant city environment, to develop and institutionalize detailed
