

ecological • cultural evaluation frame to assess existing cities. Furthermore, when a new town is built, it would contribute to proposing a plan to design a sustainable ecoculture city by applying ecological and cultural indexes. It is an evaluation index applied to existing cities (ecology, culture, green city, etc.) and is expected that it would affect planning index in new towns to be designed in the future. As not all new towns will target an ecoculture city, various ecoculture city indexes need to be developed according to the goal of each city.
