

evaluation index to assess sustainable city.

Above all, to establish the notion of ecoculture city, the change of city paradigms, the notion of ecological city and cultural city related to ecoculture city were analyzed. All potential elements were drawn through law, institution, and studies on city evaluation index. Based on all the potential elements, ecoculture city was defined through brainstorming, FGI(Focus Group Interview) expert surveys, and fusion complex approaches. Its components and notion were established.

To define ecoculture city, cultural and entire harmony was intended to be pursued in terms of ecological adaptation with the idea of cultural transition of ecology. The cultural transition of ecology means ecological resources, society-wide life style, connection with the mental, physical and intellectual characteristics of a social group and fusion complex harmony. Fusion complex harmony can be the force to communicate ecological elements and cultural phenomena and the power of city for people to make.

With these kinds of approaches, ecoculture city was defined and its components and indexes were presented in consideration of harmonious relationship with ecology, culture, and human environment. The final indexes were selected as the ones considering the fusion complex approaches and the necessity was examined. The notion was applied to the ecoculture city components from the legal aspect, the definition of ecoculture city, the quality of human life, the comfort aspect, the landscape aspect, and the
